

Probability Revision

ORDINARY LEVEL

Probability scale

The sum of probabilities of outcomes = 1

Probability of an event happening

$$P(E) = \frac{\text{number of favourable outcomes}}{\text{number of possible outcomes}}$$

Sample Spaces

H = Head
T = Tail

Toss 2 coins

	H	T
H	HH	HT
T	TH	TT

Total when 2 dice

	1	2	3	4	5	6
1	2	3	4	5	6	7
2	3	4	5	6	7	8
3	4	5	6	7	8	9
4	5	6	7	8	9	10
5	6	7	8	9	10	11
6	7	8	9	10	11	12

Relative Frequency of event in an experiment

Relative Frequency = Estimate of Probability

$$\text{Relative Frequency} = \frac{\text{number of successful trials}}{\text{total number of trials}}$$

Mutually exclusive

Outcomes are mutually exclusive if they cannot happen at the same time

Addition Law
for mutually exclusive events

If event A and B are mutually exclusive then:

$$P(A \text{ or } B) = P(A) + P(B)$$

Use Venn diagrams

Not mutually exclusive

Mutually exclusive

Independent events	Events are independent if the probability of one event is not affected by the other event happening or not happening.
<p>Multiplication Rule for independent events</p> <p>the AND rule</p>	<p>If events A and B are independent then the probability of A and B both happening is:</p> $P(A \cap B) = P(A) \times P(B)$
Bernoulli Trials	<p>'Bernoulli' only applies when:</p> <ul style="list-style-type: none"> • outcomes can be classified as success or failure • the probability of success is the same for each trial • trials are independent of each other
<p>S = SUCCESS F = FAIL</p>	$P(S, S, F) = P(S) \times P(S) \times P(F)$ $P(F, F, S) = P(F) \times P(F) \times P(S)$
$1 - P(S) = P(F)$	

Tree diagrams	<table border="0"> <thead> <tr> <th>Event 1 with outcomes A or B</th> <th>Event 2 with outcomes C or D</th> <th>Possible Outcomes</th> </tr> </thead> <tbody> <tr> <td rowspan="2"> $P(A)$ — A </td> <td>$P(C)$ — C</td> <td>A, C</td> </tr> <tr> <td>$P(D)$ — D</td> <td>A, D</td> </tr> <tr> <td rowspan="2"> $P(B)$ — B </td> <td>$P(C)$ — C</td> <td>B, C</td> </tr> <tr> <td>$P(D)$ — D</td> <td>B, D</td> </tr> </tbody> </table>	Event 1 with outcomes A or B	Event 2 with outcomes C or D	Possible Outcomes	$P(A)$ — A	$P(C)$ — C	A, C	$P(D)$ — D	A, D	$P(B)$ — B	$P(C)$ — C	B, C	$P(D)$ — D	B, D
Event 1 with outcomes A or B	Event 2 with outcomes C or D	Possible Outcomes												
$P(A)$ — A	$P(C)$ — C	A, C												
	$P(D)$ — D	A, D												
$P(B)$ — B	$P(C)$ — C	B, C												
	$P(D)$ — D	B, D												
Probabilities	$P(A, C) = P(A) \times P(C)$ $P(A, D) = P(A) \times P(D)$ $P(B, C) = P(B) \times P(C)$ $P(B, D) = P(B) \times P(D)$													
Expected Value	<p>The expected number of a particular outcome in an experiment equals the probability of the event times the number of trials.</p>													
	$E(x) = \sum x \cdot P(x)$													

Counting

<p>The Fundamental Principle of Counting</p>	<p>If one task can be done in X ways and a second task in Y ways then the first task followed by the second can be done in XY ways.</p> <p>e.g. Menu with choice of 3 starters, 4 mains and 2 desserts has how many possible meal choices?</p> <p style="text-align: center;">$Answer = 3 \times 4 \times 2 = 24$</p>
<p>Arrangements or Permutations</p> <p>(order matters!)</p> <p style="text-align: right;">nPr</p>	<p>The number of arrangements of n different objects is n!</p> <p>e.g. how many 3 digit numbers can be made out of the numbers 1, 2 and 3?</p> <p style="text-align: center;">$ANSWER = 3! = 3 \times 2 \times 1 = 6$</p> <p>e.g. how many 3 digit numbers can be made out of the numbers 1, 2, 3, 4, 5 and 6?</p> <p style="text-align: center;">$ANSWER = 6 \times 5 \times 4 = 120 (= 6P_3)$</p>

<p>Selecting Combinations</p> <p>$nCr = \binom{n}{r}$</p> <p>"n choose r"</p> <p>$\binom{n}{r} = \binom{n}{n-r}$</p>	<p>e.g. How many ways can a committee of 3 people be selected from a group of 10?</p> <p style="text-align: center;">$ANSWER = \binom{10}{3} = 120$</p> <p>e.g. How many combinations in a lottery in which you choose 4 numbers from 28?</p> <p style="text-align: center;">$ANSWER = \binom{28}{4} = 20,475$</p> <p>e.g. How many ways can 5 people be selected from a group of 6 women and 6 men if there must be at least 3 women on the committee?</p> <p>⇒ options are 3W n 2M or 4W n 1M or 5W n 0M</p> <p style="text-align: center;">$= \binom{6}{3} \times \binom{6}{2} + \binom{6}{4} \times \binom{6}{1} + \binom{6}{5} \times \binom{6}{0}$</p> <p style="text-align: center;">$= 20 \times 15 + 15 \times 6 + 6 \times 1 = 396$</p>
